CODE :

The screenshot shows the Visual Studio Code interface with a Python file named `app.py` open. The code connects to an IBM Db2 database and executes a SQL query to retrieve data from a table named `COURSE`. The output of the script is displayed in the Output window.

3 conn = ibm_db.connect("DATABASE=bludb;HOSTNAME=2d46b6b4-cbf6-40eb-bbce-6251ecba0300.bs2io90l08kqb1od8l.cg.databases.appdomain.cloud;PORT=32328;SECURITY=SSL;SSLServerCertif

6 stmt = ibm_db.exec_immediate(conn,sql)
7 dictionary = ibm_db.fetch_assoc(stmt)
8 print("The data in the tables")
9 print(dictionary)
```

Output:

```
